

Ethan Davis

Senior Systems & Mobility Engineer Supervisor

39655 Bristol St. Livonia, MI. 48154 | (614)-424-2159 | ethamdavis89@gmail.com

Professional Summary

Highly experienced and results-driven IT professional with over 15 years of experience in various roles, including Systems Administration, Network Administration, Desktop Engineering, and Mobility Management. Proven ability to support and maintain network infrastructure, administer accounts in Active Directory and Azure Active Directory, and implement complex software and hardware solutions. Adept at leading a team and providing technical support in a fast-paced environment while formulating strategies to enhance organizational IT capabilities, looking forward. Currently pursuing the B.S. Cloud and Network Engineering degree at WGU. Holds a JAMF Certified Professional certification.

Professional Experience

Onsite Engineer Tier II | Skynet Innovations - Layercake Technologies | Farmington Hills, MI
February 2022 - Present

- Managing the 24/7 operational stability of network and communication equipment for multiple municipal and private clients, maintaining 99.9% uptime for critical services supporting public safety organizations.
- Successfully completed a Hybrid Deployment of Intune from start to finish for multiple clients, including configuration of Active Directory Sync components, setting baseline policy, setting policy unique to device manufacturer, and resolving app deployment and related Firewall issues.
- Completed major hardware deployment projects. One of the largest was a refresh of over 250 laptops and desktops for City Offices, Police, and Fire Departments. Enrolled in Intune and created deployment profiles and configuration profiles suited to the duties of each department or role. This was facilitated using a mixture of static and dynamic groups, where the dynamic groups applied membership based on Active Directory Attributes from our on-prem servers.
- Assisted Project Engineers with a project to migrate network infrastructure, replacing Extreme switches that utilize Fabric Attach for routing VLANs over an E-LAN-connected network to HPE Aruba equivalents. I also assisted in migrating our FortiGate Firewall configuration to Palo Alto, and, based on the experience gained during that time, I am now a primary Palo Alto SME for my organization. This experience included setting up S2S VPN tunnels to Google Cloud Platform using BGP and working with other vendors that host different resources to connect to their organizations over VPN tunnels as well.

- Successfully remediated and restored a FortiGate HA pair that was initially half-bricked for a new client and outdated by three major versions.
- Diagnosed and resolved complex networking issues on Extreme switches and APs within the Extreme Campus controller, including troubleshooting Port Flapping and Fabric Attach.
- As the Dedicated On-Site Support Supervisor for a municipal client, I have gained proficiency in Avaya, Horizon VDI, AS400 administration, Faxcom, Papercut, and Docuware. I have created comprehensive documentation for these systems that my team uses daily. This documentation did not exist when we first started managing the environment, but I learned to manage this technology effectively and trained my team to support it as well.
- Collaborated with a client's GIS administrator to modernize a legacy 32-bit application and perform maintenance of Linux systems hosted on Google Cloud Platform (GCP).
- Managed day-to-day user creation and role-based access in ERP applications like Microsoft GP and Dynamics, New World Systems (AS400), and BS&A cloud/on-prem.
- Completed multiple OS upgrade projects to update virtual machines to supported versions of Windows by researching the correct upgrade paths based on software requirements or migrating data and applications to newly built servers.
- Administered Google Workspace for the City of Taylor, handling user management and access control. Migrated all file and email data to O365 after setting up a new GCC tenant.
- Managed the full lifecycle of Mobile Desktop Computers (MDCs) in police vehicles, acting as a technical liaison between the cities and CLEMIS, and managing Cradlepoint devices for connectivity.
- Maintained and administered firewalls (SonicWall and WatchGuard), including managing firewall rules, patching, and troubleshooting VPN tunnels.
- Performed major patch remediations on VxRail systems, upgrading them from version 7 to 8.

Desktop Engineer (I & II) | Manager of Mobile Fleet | Rite Rug | Columbus, OH May 2018 - February 2022

- I started as a Tier I with no experience managing AD or AAD, printers, policies, or servers. I leveraged my experience managing MDM systems and mobile fleets to get my foot in the door and learn as much as I could about managing IT systems in a corporate environment. During this time, I did a lot of printer repair, replacing failed switches and assisting higher tiers with configuration, accessing computers remotely with ScreenConnect for troubleshooting.
- Within the first year, I was comfortable creating new users, managing hardware deployments, accessing servers, restoring files from backups, and setting up VPN clients. I was also primarily responsible for imaging new workstations and laptops, then shipping all required materials to remote locations, and assisting with setup over the phone once they were received.
- After being promoted to Tier II, I became responsible for additional duties, such as ordering equipment from vendors, setting up a PXE boot server for imaging, and

identifying and presenting processes that I believe can be improved. One major project I accomplished was auditing all of our physical equipment, making sure the information for each asset was updated in the Kace tenant, and creating a recycle/replacement schedule for the next 5 years. When COVID started, our team was reduced to two people on-site at the corporate office (my manager and me). I used the inventory list I created previously to identify who could work at home and who could not. I worked with the executive team to order and replace the laptops and peripherals of over 150 employees nationwide so they could work from home over VPN.

- When I was promoted to Tier III, my new title reflected my specialization. I directed the full mobile device lifecycle for 1,600+ endpoints across 60 cost centers, including procurement, deployment, and billing audits. I also became a point of escalation for Junior Engineers and trained them using the documentation I had been creating since I started.
- Executed M365/Active Directory administration and permissions management. Along with creating users, managing Security Groups, and applying Group policies on-prem, I leveraged AAD sync to automatically assign user licenses and provided role-based access to our Power BI dashboards for leadership and the warehouse team. I used JAMF Pro deployment profiles tied to O365 groups to automatically push the Power BI application to iPads assigned to users with these permissions. I also completed user audits on-prem and in AAD to audit security access and reclaim unused licenses.
- Maintained existing patch management systems (Kace UEM) for all endpoints and made new deployment components or patch remediation policies as needed.
- Assisted with migrating virtual machines for file storage, applications, and backups from V-Center to Nutanix AHV.
- Completed many more projects to increase Helpdesk Efficiency, documentation initiatives, and lowered Mobility Costs Year over Year through continuous auditing.

Mobility Helpdesk | Client Support Manager | Trainer and QA Analyst | The Hastings Group
| Columbus, OH *April 2014 – May 2018*

- Provided hands-on and phone support for hardware, software, and mobile device issues. Assisted with keeping a physical inventory of returned items for our clients that can be redeployed if a phone is damaged or lost before the asset's upgrade eligibility date, lowering operational costs.
- Promoted to Client Support Manager, ensuring high levels of client satisfaction. Delivering monthly reports on Cost Savings, Helpdesk requests, and providing opportunities to assist with managing more of their services or coaching their internal IT Teams through related issues, and helping them develop best practices.
- Promoted to Training Manager, where I delivered new-hire training and quality assurance programs. I was the 12th employee when I started. When I left for a new opportunity, there was a total of 61, and we had expanded to a second physical location. I trained everyone after the 16th employee, including my direct manager, on our processes. I also created the company's first Intranet website and was also responsible for communicating company-wide initiatives and policy updates. (Hastings Connect)

- Managed our mobility helpdesk queue in a team lead capacity between training classes using Zendesk. I ensured the quality of our resolutions and documentation, identified opportunities to resolve waiting tickets, and handled issues requiring escalation. I created automated service reports for stakeholders and executive management, delivered monthly. I also wrote an application in VB that leveraged our SMTP relay to O365 that scheduled tickets for monthly deliverables, which were automatically added to our Zendesk Queue.

Tier II/ Tier III / Supervisor & Trainer | Teleperformance | Columbus, OH *December 2011 - April 2014*

- Supervised and trained teams on various projects in a call center (BPO) environment. I was primarily associated with our Verizon FIOS support project. Other projects I trained employees to support were Zenimax -Elder Scrolls Online, Figi's Gifts in Good Taste, and United Healthcare.
- Before becoming a supervisor/trainer, I started out as a Tier II support analyst, taking basic incoming calls to troubleshoot cable, internet, and phone issues for Verizon FIO customers. Within 4 months, I was promoted to the Internal Helpdesk, where I handled escalations of Tier II calls, approved dispatches, assisted customers with business-class service troubleshooting, delivered excellent experiences to VIP customers, and took ownership of complex issues requiring ongoing follow-up and coordination with the corporate networking team.

Technical Skills

- **Cloud & Identity Management:** Microsoft Azure, Microsoft Entra ID, Google Cloud Platform (GCP), Google Workspace, Office 365, SharePoint, Microsoft Teams
- **Infrastructure & Virtualization:** VMware vSphere, VXrail, Microsoft SQL Server, AS400, Microsoft Operating Systems, Linux
- **Networking & Security:** FortiGate, SonicWall, WatchGuard, HPE Aruba, Extreme Switches, EDR/XDR, VPN Troubleshooting
- **Endpoint & Mobility Management:** Microsoft Intune, JAMF, VMware AirWatch, Meraki, Apple Business Manager, Cradlepoint Cloud.
- **Applications:** AutoTask, ItGlue, Datto, Microsoft Dynamics (CRM), ERP Systems, BS&A Cloud and On-Prem, Microsoft Office Suite, KACE, Zendesk, Service Now, Integrated Ricoh App deployment, Lenel On-Guard, Verkada Cloud, OneFS, Mitel, Vonage

Ancillary Skills

- **Web Development:** HTML, CSS, WordPress, Node.js, React, Bootstrap, Jupyter Notebook, Adobe Creative Suite (Photoshop, After Effects, InDesign, Illustrator, Adobe XD)

Education & Certifications

- **B.S. Cloud and Network Engineering (In-Progress)**
- **Microsoft AZ-104 (In-Progress - B.S.C.N.E)**
- **Microsoft AZ-305 (In-Progress - B.S.C.N.E)**
- **Associate of Science** | Columbus State Community College
- **Graduate** | Ohio Center for Broadcasting
- **Certifications:** JAMF Certified Professional
